DATE	2011 September 1st
SUBJET	Front damper external evolution

CONCERNED: ALL CHAMPIONSHIPS

We want to inform you about a front damper evolution.

The reference is the same (77 11 160 007) but the new generation presents some external different characteristics:

1) upper point fastening

Old version :
thread M150 + welded spacer

New version :
thread M125 + full machined area

→ The corresponding locknut is delivered with the new damper

2) lower cap

New version :
Black plastic cap

Old version :
metal cap

→ The valving / setting remain strictly unchanged

Both versions are now allowed in all our championships.
